

Adding Fractions - Like and Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{1}{2} + \frac{6}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{5}{8} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{6}{8} = \frac{\quad}{\quad}$$

$$\frac{3}{5} + \frac{5}{8} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{5} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{6}{7} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{5}{6} + \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{3}{5} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{7}{8} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{2}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{8} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{4}{7} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{6}{7} = \frac{19}{14}$$

$$\frac{2}{4} + \frac{5}{8} = \frac{9}{8}$$

$$\frac{1}{2} + \frac{6}{8} = \frac{5}{4}$$

$$\frac{3}{5} + \frac{5}{8} = \frac{49}{40}$$

$$\frac{3}{4} + \frac{3}{4} = \frac{3}{2}$$

$$\frac{2}{5} + \frac{3}{4} = \frac{23}{20}$$

$$\frac{1}{2} + \frac{6}{7} = \frac{19}{14}$$

$$\frac{1}{3} + \frac{3}{4} = \frac{13}{12}$$

$$\frac{2}{3} + \frac{2}{3} = \frac{4}{3}$$

$$\frac{5}{6} + \frac{3}{6} = \frac{4}{3}$$

$$\frac{3}{5} + \frac{5}{6} = \frac{43}{30}$$

$$\frac{3}{4} + \frac{2}{3} = \frac{17}{12}$$

$$\frac{7}{8} + \frac{2}{3} = \frac{37}{24}$$

$$\frac{3}{4} + \frac{2}{4} = \frac{5}{4}$$

$$\frac{2}{8} + \frac{5}{6} = \frac{13}{12}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{5}{4}$$

$$\frac{4}{7} + \frac{2}{3} = \frac{26}{21}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{7}{6}$$
