

Adding Fractions - Like and Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{7}{8} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{3}{6} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{7}{8} + \frac{3}{5} = \frac{\quad}{\quad}$$

$$\frac{4}{5} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{4}{7} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{3}{5} + \frac{4}{7} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{6}{7} + \frac{6}{8} = \frac{\quad}{\quad}$$

$$\frac{6}{7} + \frac{1}{5} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{4}{8} = \frac{\quad}{\quad}$$

$$\frac{4}{5} + \frac{2}{7} = \frac{\quad}{\quad}$$

$$\frac{4}{7} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{5}{7} + \frac{4}{5} = \frac{\quad}{\quad}$$

$$\frac{7}{8} + \frac{1}{2} = \frac{11}{8}$$

$$\frac{3}{6} + \frac{5}{6} = \frac{4}{3}$$

$$\frac{7}{8} + \frac{3}{5} = \frac{59}{40}$$

$$\frac{4}{5} + \frac{1}{4} = \frac{21}{20}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{7}{6}$$

$$\frac{4}{7} + \frac{1}{2} = \frac{15}{14}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{7}{6}$$

$$\frac{3}{5} + \frac{4}{7} = \frac{41}{35}$$

$$\frac{3}{4} + \frac{1}{2} = \frac{5}{4}$$

$$\frac{2}{3} + \frac{4}{6} = \frac{4}{3}$$

$$\frac{6}{7} + \frac{6}{8} = \frac{45}{28}$$

$$\frac{6}{7} + \frac{1}{5} = \frac{37}{35}$$

$$\frac{2}{4} + \frac{4}{6} = \frac{7}{6}$$

$$\frac{5}{8} + \frac{4}{8} = \frac{9}{8}$$

$$\frac{4}{5} + \frac{2}{7} = \frac{38}{35}$$

$$\frac{4}{7} + \frac{3}{4} = \frac{37}{28}$$

$$\frac{2}{4} + \frac{5}{6} = \frac{4}{3}$$

$$\frac{5}{7} + \frac{4}{5} = \frac{53}{35}$$
