

Adding Fractions - Like and Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{1}{3} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{6}{7} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{5}{6} + \frac{4}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{1}{3} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{5}{6} + \frac{3}{7} = \frac{\quad}{\quad}$$

$$\frac{6}{8} + \frac{5}{8} = \frac{\quad}{\quad}$$

$$\frac{4}{5} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{7}{8} + \frac{3}{8} = \frac{\quad}{\quad}$$

$$\frac{4}{5} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{4} + \frac{4}{5} = \frac{\quad}{\quad}$$

$$\frac{4}{8} + \frac{6}{8} = \frac{\quad}{\quad}$$

$$\frac{3}{7} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{4}{8} + \frac{4}{7} = \frac{\quad}{\quad}$$

$$\frac{4}{6} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{3}{5} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{5}{6} = \frac{7}{6}$$

$$\frac{6}{7} + \frac{4}{6} = \frac{32}{21}$$

$$\frac{5}{6} + \frac{4}{7} = \frac{59}{42}$$

$$\frac{2}{4} + \frac{3}{4} = \frac{5}{4}$$

$$\frac{3}{4} + \frac{1}{3} = \frac{13}{12}$$

$$\frac{3}{4} + \frac{1}{2} = \frac{5}{4}$$

$$\frac{5}{6} + \frac{3}{7} = \frac{53}{42}$$

$$\frac{6}{8} + \frac{5}{8} = \frac{11}{8}$$

$$\frac{4}{5} + \frac{3}{4} = \frac{31}{20}$$

$$\frac{7}{8} + \frac{3}{8} = \frac{5}{4}$$

$$\frac{4}{5} + \frac{4}{6} = \frac{22}{15}$$

$$\frac{1}{4} + \frac{4}{5} = \frac{21}{20}$$

$$\frac{4}{8} + \frac{6}{8} = \frac{5}{4}$$

$$\frac{3}{7} + \frac{2}{3} = \frac{23}{21}$$

$$\frac{4}{8} + \frac{4}{7} = \frac{15}{14}$$

$$\frac{4}{6} + \frac{3}{4} = \frac{17}{12}$$

$$\frac{2}{4} + \frac{5}{7} = \frac{17}{14}$$

$$\frac{2}{3} + \frac{3}{5} = \frac{19}{15}$$
