

## Adding Fractions - Like and Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{7}{8} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{5}{7} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{4}{7} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{6}{7} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{4}{7} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{5}{8} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{5}{8} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{5}{8} + \frac{3}{7} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{5}{8} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{4}{7} = \frac{\square}{\square}$$

$$\frac{5}{7} + \frac{5}{7} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{2}{4} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{6}{8} + \frac{6}{7} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{3}{4} = \frac{13}{8}$$

$$\frac{1}{3} + \frac{3}{4} = \frac{13}{12}$$

$$\frac{5}{6} + \frac{2}{6} = \frac{7}{6}$$

$$\frac{5}{7} + \frac{3}{8} = \frac{61}{56}$$

$$\frac{3}{5} + \frac{4}{7} = \frac{41}{35}$$

$$\frac{5}{6} + \frac{1}{3} = \frac{7}{6}$$

$$\frac{6}{7} + \frac{3}{8} = \frac{69}{56}$$

$$\frac{4}{7} + \frac{5}{6} = \frac{59}{42}$$

$$\frac{7}{8} + \frac{5}{8} = \frac{3}{2}$$

$$\frac{1}{2} + \frac{5}{8} = \frac{9}{8}$$

$$\frac{3}{5} + \frac{1}{2} = \frac{11}{10}$$

$$\frac{5}{8} + \frac{3}{7} = \frac{59}{56}$$

$$\frac{1}{2} + \frac{5}{8} = \frac{9}{8}$$

$$\frac{5}{6} + \frac{4}{7} = \frac{59}{42}$$

$$\frac{5}{7} + \frac{5}{7} = \frac{10}{7}$$

$$\frac{2}{3} + \frac{2}{4} = \frac{7}{6}$$

$$\frac{5}{6} + \frac{2}{3} = \frac{3}{2}$$

$$\frac{6}{8} + \frac{6}{7} = \frac{45}{28}$$
