

## Adding Fractions - Like and Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{5}{6} + \frac{2}{7} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{7}{8} + \frac{3}{5} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{6}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{2}{7} = \frac{\quad}{\quad}$$

$$\frac{6}{8} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{5}{6} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{5}{7} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{4}{5} + \frac{2}{4} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{4}{5} = \frac{\quad}{\quad}$$

$$\frac{4}{6} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{4}{8} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{4}{6} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{5}{6} + \frac{2}{7} = \frac{47}{42}$$

$$\frac{5}{8} + \frac{5}{6} = \frac{35}{24}$$

$$\frac{3}{4} + \frac{5}{7} = \frac{41}{28}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{7}{6}$$

$$\frac{3}{4} + \frac{5}{7} = \frac{41}{28}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{7}{6}$$

$$\frac{7}{8} + \frac{3}{5} = \frac{59}{40}$$

$$\frac{1}{3} + \frac{6}{7} = \frac{25}{21}$$

$$\frac{2}{3} + \frac{3}{4} = \frac{17}{12}$$

$$\frac{3}{4} + \frac{2}{7} = \frac{29}{28}$$

$$\frac{6}{8} + \frac{2}{3} = \frac{17}{12}$$

$$\frac{5}{6} + \frac{5}{7} = \frac{65}{42}$$

$$\frac{5}{7} + \frac{3}{4} = \frac{41}{28}$$

$$\frac{4}{5} + \frac{2}{4} = \frac{13}{10}$$

$$\frac{3}{4} + \frac{4}{5} = \frac{31}{20}$$

$$\frac{4}{6} + \frac{5}{7} = \frac{29}{21}$$

$$\frac{4}{8} + \frac{5}{6} = \frac{4}{3}$$

$$\frac{4}{6} + \frac{5}{7} = \frac{29}{21}$$
