

Adding Fractions - Like and Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{3}{4} + \frac{3}{5} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{7}{8} = \frac{\square}{\square}$$

$$\frac{5}{7} + \frac{2}{5} = \frac{\square}{\square}$$

$$\frac{2}{5} + \frac{7}{8} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{4}{5} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{7}{8} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{6}{7} + \frac{4}{7} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{4}{6} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{6}{7} = \frac{\square}{\square}$$

$$\frac{4}{8} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{3}{7} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{3}{5} = \frac{27}{20}$$

$$\frac{1}{3} + \frac{3}{4} = \frac{13}{12}$$

$$\frac{7}{8} + \frac{1}{6} = \frac{25}{24}$$

$$\frac{2}{4} + \frac{5}{6} = \frac{4}{3}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{5}{4}$$

$$\frac{3}{6} + \frac{5}{6} = \frac{4}{3}$$

$$\frac{3}{4} + \frac{7}{8} = \frac{13}{8}$$

$$\frac{5}{7} + \frac{2}{5} = \frac{39}{35}$$

$$\frac{2}{5} + \frac{7}{8} = \frac{51}{40}$$

$$\frac{7}{8} + \frac{1}{2} = \frac{11}{8}$$

$$\frac{4}{5} + \frac{2}{3} = \frac{22}{15}$$

$$\frac{2}{3} + \frac{7}{8} = \frac{37}{24}$$

$$\frac{3}{4} + \frac{1}{2} = \frac{5}{4}$$

$$\frac{6}{7} + \frac{4}{7} = \frac{10}{7}$$

$$\frac{4}{6} + \frac{4}{6} = \frac{4}{3}$$

$$\frac{1}{4} + \frac{6}{7} = \frac{31}{28}$$

$$\frac{4}{8} + \frac{3}{4} = \frac{5}{4}$$

$$\frac{3}{4} + \frac{3}{7} = \frac{33}{28}$$
