

Adding Fractions - Like and Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{1}{2} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{6} + \frac{6}{8} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{4}{6} = \frac{\square}{\square}$$

$$\frac{1}{8} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{3}{7} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{5}{8} = \frac{\square}{\square}$$

$$\frac{2}{6} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{8} + \frac{4}{7} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{1}{8} = \frac{\square}{\square}$$

$$\frac{4}{7} + \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{4}{7} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{5}{8} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{1}{4} = \frac{\square}{\square}$$

$$\frac{1}{7} + \frac{4}{5} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{1}{2} = \frac{1}{1}$$

$$\frac{3}{6} + \frac{1}{5} = \frac{7}{10}$$

$$\frac{1}{6} + \frac{6}{8} = \frac{11}{12}$$

$$\frac{1}{4} + \frac{4}{6} = \frac{11}{12}$$

$$\frac{1}{8} + \frac{2}{3} = \frac{19}{24}$$

$$\frac{3}{6} + \frac{3}{7} = \frac{13}{14}$$

$$\frac{1}{4} + \frac{5}{8} = \frac{7}{8}$$

$$\frac{2}{6} + \frac{3}{8} = \frac{17}{24}$$

$$\frac{2}{4} + \frac{1}{2} = \frac{1}{1}$$

$$\frac{3}{8} + \frac{4}{7} = \frac{53}{56}$$

$$\frac{2}{3} + \frac{1}{3} = \frac{1}{1}$$

$$\frac{1}{3} + \frac{1}{8} = \frac{11}{24}$$

$$\frac{4}{7} + \frac{1}{6} = \frac{31}{42}$$

$$\frac{4}{7} + \frac{3}{8} = \frac{53}{56}$$

$$\frac{5}{8} + \frac{1}{3} = \frac{23}{24}$$

$$\frac{1}{2} + \frac{1}{4} = \frac{3}{4}$$

$$\frac{1}{7} + \frac{4}{5} = \frac{33}{35}$$

$$\frac{4}{6} + \frac{1}{3} = \frac{1}{1}$$
