Addition Fractions - Like Denominators

Calculate the value of each addition question in lowest terms

$\frac{2}{7} + \frac{1}{7} = \frac{\square}{\square}$

$\frac{2}{5} + \frac{1}{5} = \frac{\square}{\square}$

$\frac{4}{5} + \frac{1}{5} = \frac{\square}{\square}$

$\frac{1}{3} + \frac{1}{3} = \frac{\square}{\square}$

$\frac{3}{4} + \frac{1}{4} = \frac{\square}{\square}$

$\frac{1}{2} + \frac{1}{2} = \frac{\square}{\square}$

$\frac{3}{8} + \frac{2}{8} = \frac{\square}{\square}$

$\frac{2}{5} + \frac{3}{5} = \frac{\square}{\square}$

$\frac{1}{6} + \frac{3}{6} = \frac{\square}{\square}$

$\frac{1}{3} + \frac{1}{3} = \frac{\square}{\square}$

$\frac{3}{4} + \frac{1}{4} = \frac{\square}{\square}$

$\frac{6}{7} + \frac{1}{7} = \frac{\square}{\square}$

$\frac{1}{2} + \frac{1}{2} = \frac{\square}{\square}$

$\frac{1}{6} + \frac{3}{6} = \frac{\square}{\square}$

$\frac{4}{8} + \frac{4}{8} = \frac{\square}{\square}$

$\frac{6}{8} + \frac{1}{8} = \frac{\square}{\square}$

$\frac{3}{4} + \frac{1}{4} = \frac{\square}{\square}$

$\frac{1}{7} + \frac{4}{7} = \frac{\square}{\square}$

$\frac{2}{7} + \frac{1}{7} = \frac{3}{7}$

$\frac{2}{5} + \frac{1}{5} = \frac{3}{5}$

$\frac{4}{5} + \frac{1}{5} = \frac{1}{1}$

$\frac{1}{3} + \frac{1}{3} = \frac{2}{3}$

$\frac{3}{4} + \frac{1}{4} = \frac{1}{1}$

$\frac{1}{2} + \frac{1}{2} = \frac{1}{1}$

$\frac{3}{8} + \frac{2}{8} = \frac{5}{8}$

$\frac{2}{5} + \frac{3}{5} = \frac{1}{1}$

$\frac{1}{6} + \frac{3}{6} = \frac{2}{3}$

$\frac{1}{3} + \frac{1}{3} = \frac{2}{3}$

$\frac{3}{4} + \frac{1}{4} = \frac{1}{1}$

$\frac{6}{7} + \frac{1}{7} = \frac{1}{1}$

$\frac{1}{2} + \frac{1}{2} = \frac{1}{1}$

$\frac{1}{6} + \frac{3}{6} = \frac{2}{3}$

$\frac{4}{8} + \frac{4}{8} = \frac{1}{1}$

$\frac{6}{8} + \frac{1}{8} = \frac{7}{8}$

$\frac{3}{4} + \frac{1}{4} = \frac{1}{1}$

$\frac{1}{7} + \frac{4}{7} = \frac{5}{7}$
