

**Addition Fractions - Like Denominators**

Calculate the value of each addition question in lowest terms

$$\frac{1}{2} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{4}{5} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{2}{4} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{1}{4} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{4}{5} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{3}{8} + \frac{4}{8} = \frac{\square}{\square}$$

$$\frac{2}{7} + \frac{5}{7} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{2}{5} = \frac{\square}{\square}$$

$$\frac{2}{8} + \frac{1}{8} = \frac{\square}{\square}$$

$$\frac{3}{7} + \frac{3}{7} = \frac{\square}{\square}$$

$$\frac{2}{6} + \frac{4}{6} = \frac{\square}{\square}$$

$$\frac{2}{8} + \frac{6}{8} = \frac{\square}{\square}$$

$$\frac{1}{6} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{1}{2} = \frac{1}{1}$$

$$\frac{1}{5} + \frac{4}{5} = \frac{1}{1}$$

$$\frac{1}{4} + \frac{2}{4} = \frac{3}{4}$$

$$\frac{2}{3} + \frac{1}{3} = \frac{1}{1}$$

$$\frac{1}{2} + \frac{1}{2} = \frac{1}{1}$$

$$\frac{3}{6} + \frac{1}{6} = \frac{2}{3}$$

$$\frac{2}{4} + \frac{1}{4} = \frac{3}{4}$$

$$\frac{1}{3} + \frac{2}{3} = \frac{1}{1}$$

$$\frac{4}{5} + \frac{1}{5} = \frac{1}{1}$$

$$\frac{1}{5} + \frac{1}{5} = \frac{2}{5}$$

$$\frac{3}{8} + \frac{4}{8} = \frac{7}{8}$$

$$\frac{2}{7} + \frac{5}{7} = \frac{1}{1}$$

$$\frac{3}{5} + \frac{2}{5} = \frac{1}{1}$$

$$\frac{2}{8} + \frac{1}{8} = \frac{3}{8}$$

$$\frac{3}{7} + \frac{3}{7} = \frac{6}{7}$$

$$\frac{2}{6} + \frac{4}{6} = \frac{1}{1}$$

$$\frac{2}{8} + \frac{6}{8} = \frac{1}{1}$$

$$\frac{1}{6} + \frac{5}{6} = \frac{1}{1}$$
