Adding Fractions - Like and Unlike Denominators

Calculate the value of each addition question in lowest terms

$\frac{2}{3} + \frac{3}{4} = \frac{\square}{\square}$

$\frac{2}{7} + \frac{1}{2} = \frac{\square}{\square}$

$\frac{2}{4} + \frac{2}{3} = \frac{\square}{\square}$

$\frac{4}{7} + \frac{1}{4} = \frac{\square}{\square}$

$\frac{2}{7} + \frac{6}{7} = \frac{\square}{\square}$

$\frac{2}{6} + \frac{1}{6} = \frac{\square}{\square}$

$\frac{1}{5} + \frac{1}{3} = \frac{\square}{\square}$

$\frac{2}{6} + \frac{5}{7} = \frac{\square}{\square}$

$\frac{4}{8} + \frac{2}{4} = \frac{\square}{\square}$

$\frac{1}{2} + \frac{2}{3} = \frac{\square}{\square}$

$\frac{1}{5} + \frac{1}{3} = \frac{\square}{\square}$

$\frac{1}{3} + \frac{4}{5} = \frac{\square}{\square}$

$\frac{3}{7} + \frac{5}{6} = \frac{\square}{\square}$

$\frac{2}{6} + \frac{1}{2} = \frac{\square}{\square}$

$\frac{3}{5} + \frac{1}{3} = \frac{\square}{\square}$

$\frac{1}{3} + \frac{1}{4} = \frac{\square}{\square}$

$\frac{2}{3} + \frac{4}{5} = \frac{\square}{\square}$

$\frac{2}{7} + \frac{1}{2} = \frac{\square}{\square}$

$\frac{2}{3} + \frac{3}{4} = \frac{17}{12}$

$\frac{2}{7} + \frac{1}{2} = \frac{11}{14}$

$\frac{2}{4} + \frac{2}{3} = \frac{7}{6}$

$\frac{4}{7} + \frac{1}{4} = \frac{23}{28}$

$\frac{2}{7} + \frac{6}{7} = \frac{8}{7}$

$\frac{2}{6} + \frac{1}{6} = \frac{1}{2}$

$\frac{1}{5} + \frac{1}{3} = \frac{8}{15}$

$\frac{2}{6} + \frac{5}{7} = \frac{22}{21}$

$\frac{4}{8} + \frac{2}{4} = \frac{1}{1}$

$\frac{1}{2} + \frac{2}{3} = \frac{7}{6}$

$\frac{1}{5} + \frac{1}{3} = \frac{8}{15}$

$\frac{1}{3} + \frac{4}{5} = \frac{17}{15}$

$\frac{3}{7} + \frac{5}{6} = \frac{53}{42}$

$\frac{2}{6} + \frac{1}{2} = \frac{5}{6}$

$\frac{3}{5} + \frac{1}{3} = \frac{14}{15}$

$\frac{1}{3} + \frac{1}{4} = \frac{7}{12}$

$\frac{2}{3} + \frac{4}{5} = \frac{22}{15}$

$\frac{2}{7} + \frac{1}{2} = \frac{11}{14}$
