

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{5}{8} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{5}{7} + \frac{3}{8} = \frac{\quad}{\quad}$$

$$\frac{2}{7} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{5}{8} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{1}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{5} + \frac{1}{3} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{4}{7} + \frac{2}{5} = \frac{\quad}{\quad}$$

$$\frac{6}{7} + \frac{1}{5} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{2}{4} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{7}{8} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{1}{6} = \frac{\quad}{\quad}$$

$$\frac{4}{6} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{1}{7} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{5}{6} = \frac{35}{24}$$

$$\frac{5}{7} + \frac{3}{8} = \frac{61}{56}$$

$$\frac{2}{7} + \frac{5}{6} = \frac{47}{42}$$

$$\frac{5}{8} + \frac{1}{4} = \frac{7}{8}$$

$$\frac{3}{4} + \frac{5}{8} = \frac{11}{8}$$

$$\frac{1}{2} + \frac{5}{7} = \frac{17}{14}$$

$$\frac{3}{4} + \frac{1}{7} = \frac{25}{28}$$

$$\frac{2}{5} + \frac{1}{3} = \frac{11}{15}$$

$$\frac{1}{2} + \frac{1}{4} = \frac{3}{4}$$

$$\frac{4}{7} + \frac{2}{5} = \frac{34}{35}$$

$$\frac{6}{7} + \frac{1}{5} = \frac{37}{35}$$

$$\frac{1}{2} + \frac{3}{6} = \frac{1}{1}$$

$$\frac{1}{2} + \frac{2}{4} = \frac{1}{1}$$

$$\frac{1}{2} + \frac{7}{8} = \frac{11}{8}$$

$$\frac{2}{4} + \frac{2}{3} = \frac{7}{6}$$

$$\frac{5}{8} + \frac{1}{6} = \frac{19}{24}$$

$$\frac{4}{6} + \frac{1}{2} = \frac{7}{6}$$

$$\frac{1}{3} + \frac{1}{7} = \frac{10}{21}$$
