

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{4}{6} + \frac{6}{8} = \frac{\quad}{\quad}$$

$$\frac{1}{5} + \frac{1}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{2}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{7} + \frac{4}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{6} + \frac{1}{5} = \frac{\quad}{\quad}$$

$$\frac{6}{8} + \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{5} + \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{2}{5} = \frac{\quad}{\quad}$$

$$\frac{2}{6} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{1}{6} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{1}{4} + \frac{4}{5} = \frac{\quad}{\quad}$$

$$\frac{3}{6} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{4}{7} + \frac{1}{3} = \frac{\quad}{\quad}$$

$$\frac{2}{7} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{2}{5} = \frac{\quad}{\quad}$$

$$\frac{4}{7} + \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{4}{6} + \frac{6}{8} = \frac{17}{12}$$

$$\frac{1}{5} + \frac{1}{6} = \frac{11}{30}$$

$$\frac{1}{2} + \frac{2}{6} = \frac{5}{6}$$

$$\frac{1}{7} + \frac{4}{6} = \frac{17}{21}$$

$$\frac{1}{6} + \frac{1}{5} = \frac{11}{30}$$

$$\frac{6}{8} + \frac{3}{6} = \frac{5}{4}$$

$$\frac{1}{5} + \frac{3}{6} = \frac{7}{10}$$

$$\frac{1}{2} + \frac{2}{5} = \frac{9}{10}$$

$$\frac{2}{6} + \frac{1}{4} = \frac{7}{12}$$

$$\frac{2}{3} + \frac{1}{6} = \frac{5}{6}$$

$$\frac{2}{3} + \frac{5}{7} = \frac{29}{21}$$

$$\frac{1}{4} + \frac{4}{5} = \frac{21}{20}$$

$$\frac{3}{6} + \frac{1}{2} = \frac{1}{1}$$

$$\frac{4}{7} + \frac{1}{3} = \frac{19}{21}$$

$$\frac{2}{7} + \frac{3}{4} = \frac{29}{28}$$

$$\frac{2}{4} + \frac{3}{6} = \frac{1}{1}$$

$$\frac{1}{2} + \frac{2}{5} = \frac{9}{10}$$

$$\frac{4}{7} + \frac{3}{6} = \frac{15}{14}$$
