

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{1}{8} + \frac{6}{7} = \frac{\quad}{\quad}$$

$$\frac{3}{6} + \frac{7}{8} = \frac{\quad}{\quad}$$

$$\frac{5}{6} + \frac{2}{7} = \frac{\quad}{\quad}$$

$$\frac{5}{6} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{4}{7} + \frac{2}{5} = \frac{\quad}{\quad}$$

$$\frac{5}{7} + \frac{2}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{8} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{1}{3} = \frac{\quad}{\quad}$$

$$\frac{4}{5} + \frac{2}{6} = \frac{\quad}{\quad}$$

$$\frac{2}{5} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{2}{5} = \frac{\quad}{\quad}$$

$$\frac{1}{5} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{4}{5} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{4}{5} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{5}{7} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{6} + \frac{2}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{7} + \frac{7}{8} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{1}{8} + \frac{6}{7} = \frac{55}{56}$$

$$\frac{3}{6} + \frac{7}{8} = \frac{11}{8}$$

$$\frac{5}{6} + \frac{2}{7} = \frac{47}{42}$$

$$\frac{5}{6} + \frac{3}{4} = \frac{19}{12}$$

$$\frac{4}{7} + \frac{2}{5} = \frac{34}{35}$$

$$\frac{5}{7} + \frac{2}{6} = \frac{22}{21}$$

$$\frac{1}{8} + \frac{1}{2} = \frac{5}{8}$$

$$\frac{1}{2} + \frac{1}{3} = \frac{5}{6}$$

$$\frac{4}{5} + \frac{2}{6} = \frac{17}{15}$$

$$\frac{2}{5} + \frac{1}{4} = \frac{13}{20}$$

$$\frac{1}{3} + \frac{2}{5} = \frac{11}{15}$$

$$\frac{1}{5} + \frac{1}{4} = \frac{9}{20}$$

$$\frac{4}{5} + \frac{1}{2} = \frac{13}{10}$$

$$\frac{4}{5} + \frac{1}{2} = \frac{13}{10}$$

$$\frac{5}{7} + \frac{3}{4} = \frac{41}{28}$$

$$\frac{2}{6} + \frac{2}{4} = \frac{5}{6}$$

$$\frac{2}{7} + \frac{7}{8} = \frac{65}{56}$$

$$\frac{2}{4} + \frac{2}{3} = \frac{7}{6}$$
