

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{1}{3} + \frac{2}{8} = \frac{\quad}{\quad}$$

$$\frac{1}{4} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{3}{8} + \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{8} + \frac{1}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{6} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{4} + \frac{3}{5} = \frac{\quad}{\quad}$$

$$\frac{3}{5} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{3}{8} = \frac{\quad}{\quad}$$

$$\frac{2}{7} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{4}{8} + \frac{3}{5} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{5}{7} = \frac{\quad}{\quad}$$

$$\frac{6}{8} + \frac{2}{5} = \frac{\quad}{\quad}$$

$$\frac{5}{7} + \frac{1}{6} = \frac{\quad}{\quad}$$

$$\frac{2}{8} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{6}{8} + \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{4}{8} + \frac{3}{7} = \frac{\quad}{\quad}$$

$$\frac{2}{6} + \frac{2}{7} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{2}{8} = \frac{7}{12}$$

$$\frac{1}{4} + \frac{1}{2} = \frac{3}{4}$$

$$\frac{3}{8} + \frac{3}{6} = \frac{7}{8}$$

$$\frac{1}{8} + \frac{1}{7} = \frac{15}{56}$$

$$\frac{2}{6} + \frac{1}{4} = \frac{7}{12}$$

$$\frac{5}{8} + \frac{3}{4} = \frac{11}{8}$$

$$\frac{2}{4} + \frac{3}{5} = \frac{11}{10}$$

$$\frac{3}{5} + \frac{2}{3} = \frac{19}{15}$$

$$\frac{1}{3} + \frac{3}{8} = \frac{17}{24}$$

$$\frac{2}{7} + \frac{1}{4} = \frac{15}{28}$$

$$\frac{4}{8} + \frac{3}{5} = \frac{11}{10}$$

$$\frac{1}{3} + \frac{5}{7} = \frac{22}{21}$$

$$\frac{6}{8} + \frac{2}{5} = \frac{23}{20}$$

$$\frac{5}{7} + \frac{1}{6} = \frac{37}{42}$$

$$\frac{2}{8} + \frac{1}{2} = \frac{3}{4}$$

$$\frac{6}{8} + \frac{3}{4} = \frac{3}{2}$$

$$\frac{4}{8} + \frac{3}{7} = \frac{13}{14}$$

$$\frac{2}{6} + \frac{2}{7} = \frac{13}{21}$$
