

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{1}{6} + \frac{1}{3} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{6}{7} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{4}{8} + \frac{5}{6} = \frac{\quad}{\quad}$$

$$\frac{4}{6} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{3}{7} = \frac{\quad}{\quad}$$

$$\frac{5}{6} + \frac{4}{8} = \frac{\quad}{\quad}$$

$$\frac{3}{8} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{5}{8} + \frac{6}{7} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{2}{8} = \frac{\quad}{\quad}$$

$$\frac{4}{7} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{3}{7} + \frac{3}{8} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{3}{6} + \frac{2}{3} = \frac{\quad}{\quad}$$

$$\frac{2}{7} + \frac{3}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{2} + \frac{2}{5} = \frac{\quad}{\quad}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{\quad}{\quad}$$

$$\frac{3}{7} + \frac{3}{8} = \frac{\quad}{\quad}$$

$$\frac{1}{6} + \frac{1}{3} = \frac{1}{2}$$

$$\frac{5}{8} + \frac{6}{7} = \frac{83}{56}$$

$$\frac{5}{8} + \frac{2}{3} = \frac{31}{24}$$

$$\frac{4}{8} + \frac{5}{6} = \frac{4}{3}$$

$$\frac{4}{6} + \frac{1}{4} = \frac{11}{12}$$

$$\frac{2}{3} + \frac{3}{7} = \frac{23}{21}$$

$$\frac{5}{6} + \frac{4}{8} = \frac{4}{3}$$

$$\frac{3}{8} + \frac{1}{2} = \frac{7}{8}$$

$$\frac{5}{8} + \frac{6}{7} = \frac{83}{56}$$

$$\frac{1}{2} + \frac{2}{8} = \frac{3}{4}$$

$$\frac{4}{7} + \frac{2}{3} = \frac{26}{21}$$

$$\frac{3}{7} + \frac{3}{8} = \frac{45}{56}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{7}{6}$$

$$\frac{3}{6} + \frac{2}{3} = \frac{7}{6}$$

$$\frac{2}{7} + \frac{3}{6} = \frac{11}{14}$$

$$\frac{1}{2} + \frac{2}{5} = \frac{9}{10}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{7}{6}$$

$$\frac{3}{7} + \frac{3}{8} = \frac{45}{56}$$
