

## Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{2}{5} + \frac{5}{8} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{5}{7} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{7}{8} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{4}{7} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{3}{5} = \frac{\square}{\square}$$

$$\frac{2}{5} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{6}{8} + \frac{2}{7} = \frac{\square}{\square}$$

$$\frac{4}{7} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{6}{7} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{5}{7} + \frac{4}{8} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{2}{5} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{2}{7} = \frac{\square}{\square}$$

$$\frac{2}{6} + \frac{6}{7} = \frac{\square}{\square}$$

$$\frac{2}{5} + \frac{5}{8} = \frac{41}{40}$$

$$\frac{3}{6} + \frac{5}{7} = \frac{17}{14}$$

$$\frac{2}{3} + \frac{7}{8} = \frac{37}{24}$$

$$\frac{1}{2} + \frac{4}{7} = \frac{15}{14}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{7}{6}$$

$$\frac{3}{4} + \frac{3}{8} = \frac{9}{8}$$

$$\frac{4}{6} + \frac{3}{5} = \frac{19}{15}$$

$$\frac{2}{5} + \frac{5}{6} = \frac{37}{30}$$

$$\frac{3}{4} + \frac{2}{3} = \frac{17}{12}$$

$$\frac{6}{8} + \frac{2}{7} = \frac{29}{28}$$

$$\frac{4}{7} + \frac{3}{4} = \frac{37}{28}$$

$$\frac{3}{5} + \frac{2}{3} = \frac{19}{15}$$

$$\frac{6}{7} + \frac{2}{3} = \frac{32}{21}$$

$$\frac{5}{7} + \frac{4}{8} = \frac{17}{14}$$

$$\frac{3}{4} + \frac{2}{3} = \frac{17}{12}$$

$$\frac{4}{6} + \frac{2}{5} = \frac{16}{15}$$

$$\frac{5}{6} + \frac{2}{7} = \frac{47}{42}$$

$$\frac{2}{6} + \frac{6}{7} = \frac{25}{21}$$
