

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{4}{7} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{6}{7} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{1}{4} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{7}{8} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{4}{8} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{3}{8} + \frac{5}{7} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{5}{7} = \frac{\square}{\square}$$

$$\frac{5}{8} + \frac{4}{6} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{2}{4} = \frac{\square}{\square}$$

$$\frac{6}{8} + \frac{5}{7} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{3}{5} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{3}{7} + \frac{4}{5} = \frac{\square}{\square}$$

$$\frac{4}{7} + \frac{1}{2} = \frac{15}{14}$$

$$\frac{2}{4} + \frac{5}{6} = \frac{4}{3}$$

$$\frac{6}{7} + \frac{1}{2} = \frac{19}{14}$$

$$\frac{3}{4} + \frac{2}{6} = \frac{13}{12}$$

$$\frac{5}{6} + \frac{1}{4} = \frac{13}{12}$$

$$\frac{1}{3} + \frac{7}{8} = \frac{29}{24}$$

$$\frac{3}{5} + \frac{4}{8} = \frac{11}{10}$$

$$\frac{3}{6} + \frac{3}{4} = \frac{5}{4}$$

$$\frac{5}{6} + \frac{3}{4} = \frac{19}{12}$$

$$\frac{3}{8} + \frac{5}{7} = \frac{61}{56}$$

$$\frac{1}{2} + \frac{5}{7} = \frac{17}{14}$$

$$\frac{5}{8} + \frac{4}{6} = \frac{31}{24}$$

$$\frac{7}{8} + \frac{1}{3} = \frac{29}{24}$$

$$\frac{4}{6} + \frac{2}{4} = \frac{7}{6}$$

$$\frac{6}{8} + \frac{5}{7} = \frac{41}{28}$$

$$\frac{4}{6} + \frac{3}{5} = \frac{19}{15}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{5}{4}$$

$$\frac{3}{7} + \frac{4}{5} = \frac{43}{35}$$
