

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{2}{4} + \frac{4}{6} = \frac{\square}{\square}$$

$$\frac{4}{5} + \frac{5}{7} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{2}{5} = \frac{\square}{\square}$$

$$\frac{5}{7} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{5}{8} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{2}{4} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{6}{7} = \frac{\square}{\square}$$

$$\frac{4}{8} + \frac{3}{5} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{2}{4} = \frac{\square}{\square}$$

$$\frac{4}{7} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{7} + \frac{7}{8} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{6}{7} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{4}{8} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{4}{7} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{4}{6} = \frac{7}{6}$$

$$\frac{4}{5} + \frac{5}{7} = \frac{53}{35}$$

$$\frac{4}{6} + \frac{1}{2} = \frac{7}{6}$$

$$\frac{3}{4} + \frac{2}{5} = \frac{23}{20}$$

$$\frac{5}{7} + \frac{2}{3} = \frac{29}{21}$$

$$\frac{5}{6} + \frac{5}{8} = \frac{35}{24}$$

$$\frac{3}{5} + \frac{2}{4} = \frac{11}{10}$$

$$\frac{4}{6} + \frac{6}{7} = \frac{32}{21}$$

$$\frac{4}{8} + \frac{3}{5} = \frac{11}{10}$$

$$\frac{2}{3} + \frac{2}{4} = \frac{7}{6}$$

$$\frac{4}{7} + \frac{1}{2} = \frac{15}{14}$$

$$\frac{3}{7} + \frac{7}{8} = \frac{73}{56}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{5}{4}$$

$$\frac{1}{2} + \frac{6}{7} = \frac{19}{14}$$

$$\frac{7}{8} + \frac{1}{2} = \frac{11}{8}$$

$$\frac{3}{5} + \frac{4}{8} = \frac{11}{10}$$

$$\frac{3}{6} + \frac{4}{7} = \frac{15}{14}$$

$$\frac{2}{4} + \frac{2}{3} = \frac{7}{6}$$
