

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{3}{5} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{4}{7} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{4}{5} = \frac{\square}{\square}$$

$$\frac{2}{5} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{3}{8} + \frac{4}{6} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{2}{7} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{2}{5} = \frac{\square}{\square}$$

$$\frac{4}{5} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{3}{6} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{2}{5} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{5}{8} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{6}{8} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{5}{6} = \frac{43}{30}$$

$$\frac{4}{7} + \frac{2}{3} = \frac{26}{21}$$

$$\frac{2}{3} + \frac{3}{4} = \frac{17}{12}$$

$$\frac{7}{8} + \frac{2}{6} = \frac{29}{24}$$

$$\frac{2}{3} + \frac{1}{2} = \frac{7}{6}$$

$$\frac{1}{2} + \frac{4}{5} = \frac{13}{10}$$

$$\frac{2}{5} + \frac{2}{3} = \frac{16}{15}$$

$$\frac{3}{8} + \frac{4}{6} = \frac{25}{24}$$

$$\frac{7}{8} + \frac{2}{7} = \frac{65}{56}$$

$$\frac{2}{3} + \frac{2}{5} = \frac{16}{15}$$

$$\frac{4}{5} + \frac{2}{3} = \frac{22}{15}$$

$$\frac{7}{8} + \frac{3}{6} = \frac{11}{8}$$

$$\frac{1}{2} + \frac{3}{4} = \frac{5}{4}$$

$$\frac{3}{5} + \frac{3}{4} = \frac{27}{20}$$

$$\frac{2}{5} + \frac{2}{3} = \frac{16}{15}$$

$$\frac{5}{8} + \frac{1}{2} = \frac{9}{8}$$

$$\frac{4}{6} + \frac{6}{8} = \frac{17}{12}$$

$$\frac{2}{3} + \frac{3}{8} = \frac{25}{24}$$
