

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{4}{5} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{4}{7} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{3}{8} + \frac{3}{4} = \frac{\square}{\square}$$

$$\frac{2}{6} + \frac{7}{8} = \frac{\square}{\square}$$

$$\frac{5}{8} + \frac{2}{3} = \frac{\square}{\square}$$

$$\frac{4}{5} + \frac{3}{6} = \frac{\square}{\square}$$

$$\frac{4}{5} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{2}{6} + \frac{4}{5} = \frac{\square}{\square}$$

$$\frac{3}{5} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{4}{8} + \frac{5}{6} = \frac{\square}{\square}$$

$$\frac{4}{5} + \frac{3}{7} = \frac{\square}{\square}$$

$$\frac{2}{6} + \frac{7}{8} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{3}{6} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{4}{5} = \frac{\square}{\square}$$

$$\frac{7}{8} + \frac{4}{7} = \frac{\square}{\square}$$

$$\frac{4}{5} + \frac{1}{2} = \frac{13}{10}$$

$$\frac{4}{7} + \frac{1}{2} = \frac{15}{14}$$

$$\frac{2}{4} + \frac{2}{3} = \frac{7}{6}$$

$$\frac{3}{6} + \frac{2}{3} = \frac{7}{6}$$

$$\frac{3}{8} + \frac{3}{4} = \frac{9}{8}$$

$$\frac{2}{6} + \frac{7}{8} = \frac{29}{24}$$

$$\frac{5}{8} + \frac{2}{3} = \frac{31}{24}$$

$$\frac{4}{5} + \frac{3}{6} = \frac{13}{10}$$

$$\frac{4}{5} + \frac{2}{6} = \frac{17}{15}$$

$$\frac{2}{6} + \frac{4}{5} = \frac{17}{15}$$

$$\frac{3}{5} + \frac{5}{6} = \frac{43}{30}$$

$$\frac{4}{8} + \frac{5}{6} = \frac{4}{3}$$

$$\frac{4}{5} + \frac{3}{7} = \frac{43}{35}$$

$$\frac{2}{6} + \frac{7}{8} = \frac{29}{24}$$

$$\frac{3}{4} + \frac{3}{6} = \frac{5}{4}$$

$$\frac{1}{2} + \frac{4}{6} = \frac{7}{6}$$

$$\frac{1}{4} + \frac{4}{5} = \frac{21}{20}$$

$$\frac{7}{8} + \frac{4}{7} = \frac{81}{56}$$
