

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{1}{5} + \frac{3}{6} = \frac{\square}{\square}$$

$$\frac{1}{8} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{4}{8} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{4}{8} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{4}{8} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{4}{8} + \frac{2}{4} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{6}{8} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{4}{8} = \frac{\square}{\square}$$

$$\frac{4}{8} + \frac{3}{6} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{2}{5} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{4}{7} = \frac{\square}{\square}$$

$$\frac{2}{7} + \frac{1}{8} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{3}{6} = \frac{7}{10}$$

$$\frac{1}{8} + \frac{1}{2} = \frac{5}{8}$$

$$\frac{1}{4} + \frac{2}{6} = \frac{7}{12}$$

$$\frac{1}{5} + \frac{4}{8} = \frac{7}{10}$$

$$\frac{3}{4} + \frac{1}{6} = \frac{11}{12}$$

$$\frac{4}{8} + \frac{2}{6} = \frac{5}{6}$$

$$\frac{3}{6} + \frac{4}{8} = \frac{1}{1}$$

$$\frac{1}{3} + \frac{1}{2} = \frac{5}{6}$$

$$\frac{4}{8} + \frac{2}{4} = \frac{1}{1}$$

$$\frac{1}{4} + \frac{3}{8} = \frac{5}{8}$$

$$\frac{6}{8} + \frac{1}{5} = \frac{19}{20}$$

$$\frac{1}{5} + \frac{4}{8} = \frac{7}{10}$$

$$\frac{4}{8} + \frac{3}{6} = \frac{1}{1}$$

$$\frac{1}{3} + \frac{3}{8} = \frac{17}{24}$$

$$\frac{1}{5} + \frac{2}{6} = \frac{8}{15}$$

$$\frac{2}{5} + \frac{1}{2} = \frac{9}{10}$$

$$\frac{1}{4} + \frac{4}{7} = \frac{23}{28}$$

$$\frac{2}{7} + \frac{1}{8} = \frac{23}{56}$$
