Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$\frac{1}{8} + \frac{1}{2} = \frac{\square}{\square}$

$\frac{2}{7} + \frac{3}{6} = \frac{\square}{\square}$

$\frac{2}{5} + \frac{3}{8} = \frac{\square}{\square}$

$\frac{3}{6} + \frac{1}{3} = \frac{\square}{\square}$

$\frac{1}{7} + \frac{1}{2} = \frac{\square}{\square}$

$\frac{3}{8} + \frac{2}{5} = \frac{\square}{\square}$

$\frac{1}{4} + \frac{1}{7} = \frac{\square}{\square}$

$\frac{1}{8} + \frac{6}{7} = \frac{\square}{\square}$

$\frac{3}{6} + \frac{1}{5} = \frac{\square}{\square}$

$\frac{2}{3} + \frac{1}{5} = \frac{\square}{\square}$

$\frac{3}{7} + \frac{1}{3} = \frac{\square}{\square}$

$\frac{1}{8} + \frac{5}{7} = \frac{\square}{\square}$

$\frac{2}{6} + \frac{1}{2} = \frac{\square}{\square}$

$\frac{3}{6} + \frac{2}{8} = \frac{\square}{\square}$

$\frac{4}{6} + \frac{1}{4} = \frac{\square}{\square}$

$\frac{2}{4} + \frac{1}{5} = \frac{\square}{\square}$

$\frac{2}{6} + \frac{2}{4} = \frac{\square}{\square}$

$\frac{3}{6} + \frac{1}{3} = \frac{\square}{\square}$

$\frac{1}{8} + \frac{1}{2} = \frac{5}{8}$

$\frac{2}{7} + \frac{3}{6} = \frac{11}{14}$

$\frac{2}{5} + \frac{3}{8} = \frac{31}{40}$

$\frac{3}{6} + \frac{1}{3} = \frac{5}{6}$

$\frac{1}{7} + \frac{1}{2} = \frac{9}{14}$

$\frac{3}{8} + \frac{2}{5} = \frac{31}{40}$

$\frac{1}{4} + \frac{1}{7} = \frac{11}{28}$

$\frac{1}{8} + \frac{6}{7} = \frac{55}{56}$

$\frac{3}{6} + \frac{1}{5} = \frac{7}{10}$

$\frac{2}{3} + \frac{1}{5} = \frac{13}{15}$

$\frac{3}{7} + \frac{1}{3} = \frac{16}{21}$

$\frac{1}{8} + \frac{5}{7} = \frac{47}{56}$

$\frac{2}{6} + \frac{1}{2} = \frac{5}{6}$

$\frac{3}{6} + \frac{2}{8} = \frac{3}{4}$

$\frac{4}{6} + \frac{1}{4} = \frac{11}{12}$

$\frac{2}{4} + \frac{1}{5} = \frac{7}{10}$

$\frac{2}{6} + \frac{2}{4} = \frac{5}{6}$

$\frac{3}{6} + \frac{1}{3} = \frac{5}{6}$
