

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{2}{3} + \frac{2}{7} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{3}{7} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{1}{8} = \frac{\square}{\square}$$

$$\frac{6}{8} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{4}{6} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{8} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{2}{8} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{3}{8} + \frac{2}{7} = \frac{\square}{\square}$$

$$\frac{3}{7} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{3}{8} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{2}{7} = \frac{20}{21}$$

$$\frac{1}{4} + \frac{3}{7} = \frac{19}{28}$$

$$\frac{1}{2} + \frac{1}{6} = \frac{2}{3}$$

$$\frac{1}{3} + \frac{1}{8} = \frac{11}{24}$$

$$\frac{6}{8} + \frac{1}{5} = \frac{19}{20}$$

$$\frac{4}{6} + \frac{1}{5} = \frac{13}{15}$$

$$\frac{1}{4} + \frac{1}{3} = \frac{7}{12}$$

$$\frac{2}{4} + \frac{1}{2} = \frac{1}{1}$$

$$\frac{1}{4} + \frac{1}{2} = \frac{3}{4}$$

$$\frac{1}{4} + \frac{1}{2} = \frac{3}{4}$$

$$\frac{1}{5} + \frac{1}{3} = \frac{8}{15}$$

$$\frac{3}{4} + \frac{1}{5} = \frac{19}{20}$$

$$\frac{1}{4} + \frac{1}{5} = \frac{9}{20}$$

$$\frac{1}{8} + \frac{1}{3} = \frac{11}{24}$$

$$\frac{2}{8} + \frac{2}{6} = \frac{7}{12}$$

$$\frac{3}{8} + \frac{2}{7} = \frac{37}{56}$$

$$\frac{3}{7} + \frac{1}{2} = \frac{13}{14}$$

$$\frac{3}{8} + \frac{1}{3} = \frac{17}{24}$$
