

## Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{1}{8} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{8} + \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{2}{8} + \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{1}{4} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{2}{5} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{5}{8} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{5}{6} + \frac{1}{8} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{3}{7} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{1}{4} + \frac{1}{8} = \frac{\square}{\square}$$

$$\frac{2}{8} + \frac{2}{6} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{3}{7} = \frac{\square}{\square}$$

$$\frac{1}{8} + \frac{4}{6} = \frac{\square}{\square}$$

$$\frac{5}{8} + \frac{2}{7} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{2}{8} = \frac{\square}{\square}$$

$$\frac{1}{8} + \frac{1}{2} = \frac{5}{8}$$

$$\frac{1}{8} + \frac{1}{6} = \frac{7}{24}$$

$$\frac{2}{8} + \frac{1}{6} = \frac{5}{12}$$

$$\frac{2}{4} + \frac{1}{5} = \frac{7}{10}$$

$$\frac{1}{3} + \frac{1}{4} = \frac{7}{12}$$

$$\frac{1}{2} + \frac{1}{5} = \frac{7}{10}$$

$$\frac{2}{5} + \frac{1}{2} = \frac{9}{10}$$

$$\frac{5}{8} + \frac{2}{6} = \frac{23}{24}$$

$$\frac{5}{6} + \frac{1}{8} = \frac{23}{24}$$

$$\frac{1}{3} + \frac{1}{5} = \frac{8}{15}$$

$$\frac{3}{7} + \frac{2}{6} = \frac{16}{21}$$

$$\frac{2}{4} + \frac{1}{3} = \frac{5}{6}$$

$$\frac{1}{4} + \frac{1}{8} = \frac{3}{8}$$

$$\frac{2}{8} + \frac{2}{6} = \frac{7}{12}$$

$$\frac{1}{2} + \frac{3}{7} = \frac{13}{14}$$

$$\frac{1}{8} + \frac{4}{6} = \frac{19}{24}$$

$$\frac{5}{8} + \frac{2}{7} = \frac{51}{56}$$

$$\frac{2}{4} + \frac{2}{8} = \frac{3}{4}$$
