

Adding Fractions - Unlike Denominators

Calculate the value of each addition question in lowest terms

$$\frac{2}{8} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{3}{6} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{1}{3} = \frac{\square}{\square}$$

$$\frac{1}{6} + \frac{3}{5} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{3}{8} = \frac{\square}{\square}$$

$$\frac{3}{4} + \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{2}{4} + \frac{3}{7} = \frac{\square}{\square}$$

$$\frac{1}{8} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{3}{6} = \frac{\square}{\square}$$

$$\frac{2}{3} + \frac{2}{7} = \frac{\square}{\square}$$

$$\frac{1}{5} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{1}{7} = \frac{\square}{\square}$$

$$\frac{1}{2} + \frac{2}{4} = \frac{\square}{\square}$$

$$\frac{1}{8} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{6} + \frac{1}{4} = \frac{\square}{\square}$$

$$\frac{3}{6} + \frac{1}{5} = \frac{\square}{\square}$$

$$\frac{1}{3} + \frac{2}{7} = \frac{\square}{\square}$$

$$\frac{2}{6} + \frac{1}{2} = \frac{\square}{\square}$$

$$\frac{2}{8} + \frac{1}{2} = \frac{3}{4}$$

$$\frac{2}{4} + \frac{3}{6} = \frac{1}{1}$$

$$\frac{1}{5} + \frac{1}{3} = \frac{8}{15}$$

$$\frac{1}{6} + \frac{3}{5} = \frac{23}{30}$$

$$\frac{1}{3} + \frac{3}{8} = \frac{17}{24}$$

$$\frac{3}{4} + \frac{1}{6} = \frac{11}{12}$$

$$\frac{2}{4} + \frac{3}{7} = \frac{13}{14}$$

$$\frac{1}{8} + \frac{1}{5} = \frac{13}{40}$$

$$\frac{1}{2} + \frac{3}{6} = \frac{1}{1}$$

$$\frac{2}{3} + \frac{2}{7} = \frac{20}{21}$$

$$\frac{1}{5} + \frac{1}{2} = \frac{7}{10}$$

$$\frac{1}{3} + \frac{1}{7} = \frac{10}{21}$$

$$\frac{1}{2} + \frac{2}{4} = \frac{1}{1}$$

$$\frac{1}{8} + \frac{1}{5} = \frac{13}{40}$$

$$\frac{1}{6} + \frac{1}{4} = \frac{5}{12}$$

$$\frac{3}{6} + \frac{1}{5} = \frac{7}{10}$$

$$\frac{1}{3} + \frac{2}{7} = \frac{13}{21}$$

$$\frac{2}{6} + \frac{1}{2} = \frac{5}{6}$$
