

**Box Method Multiplication - 1Digit x 2Digit Practice**

Use the box model to solve the following questions

	$6 \times 40 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$9 \times 80 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$4 \times 70 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$3 \times 62 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$7 \times 86 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$3 \times 79 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$4 \times 56 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$6 \times 71 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$9 \times 95 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$2 \times 11 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$4 \times 93 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$2 \times 54 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$6 \times 33 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$2 \times 32 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$9 \times 34 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$2 \times 38 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	40	0	$6 \times 40 = 240$
			+ 240
6	240	0	$\frac{0}{240}$

	80	0	$9 \times 80 = 720$
			+ 720
9	720	0	$\frac{0}{720}$

	70	0	$4 \times 70 = 280$
			+ 280
4	280	0	$\frac{0}{280}$

	60	2	$3 \times 62 = 186$
			+ 180
3	180	6	$\frac{6}{186}$

	80	6	$7 \times 86 = 602$
			+ 560
7	560	42	$\frac{42}{602}$

	70	9	$3 \times 79 = 237$
			+ 210
3	210	27	$\frac{27}{237}$

	50	6	$4 \times 56 = 224$
			+ 200
4	200	24	$\frac{24}{224}$

	70	1	$6 \times 71 = 426$
			+ 420
6	420	6	$\frac{6}{426}$

	90	5	$9 \times 95 = 855$
			+ 810
9	810	45	$\frac{45}{855}$

	10	1	$2 \times 11 = 22$
			+ 20
2	20	2	$\frac{2}{22}$

	90	3	$4 \times 93 = 372$
			+ 360
4	360	12	$\frac{12}{372}$

	50	4	$2 \times 54 = 108$
			+ 100
2	100	8	$\frac{8}{108}$

	30	3	$6 \times 33 = 198$
			+ 180
6	180	18	$\frac{18}{198}$

	30	2	$2 \times 32 = 64$
			+ 60
2	60	4	$\frac{4}{64}$

	30	4	$9 \times 34 = 306$
			+ 270
9	270	36	$\frac{36}{306}$

	30	8	$2 \times 38 = 76$
			+ 60
2	60	16	$\frac{16}{76}$
