

## Box Method Multiplication - 1Digit x 2Digit Practice

Use the box model to solve the following questions

	$4 \times 96 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$6 \times 62 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$5 \times 70 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$5 \times 51 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$3 \times 91 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$8 \times 30 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$8 \times 83 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$4 \times 20 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$9 \times 16 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$2 \times 55 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$8 \times 52 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$7 \times 15 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$5 \times 94 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$3 \times 51 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$6 \times 61 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	$4 \times 76 = ?$
--	-------------------

The box model consists of a rectangle divided into two rows and three columns. The top row is shaded light red and the bottom row is shaded light green.

	90	6	$4 \times 96 = 384$
			+ 360
4	360	24	$\frac{24}{384}$

	60	2	$6 \times 62 = 372$
			+ 360
6	360	12	$\frac{12}{372}$

	70	0	$5 \times 70 = 350$
			+ 350
5	350	0	$\frac{0}{350}$

	50	1	$5 \times 51 = 255$
			+ 250
5	250	5	$\frac{5}{255}$

	90	1	$3 \times 91 = 273$
			+ 270
3	270	3	$\frac{3}{273}$

	30	0	$8 \times 30 = 240$
			+ 240
8	240	0	$\frac{0}{240}$

	80	3	$8 \times 83 = 664$
			+ 640
8	640	24	$\frac{24}{664}$

	20	0	$4 \times 20 = 80$
			+ 80
4	80	0	$\frac{0}{80}$

	10	6	$9 \times 16 = 144$
			+ 90
9	90	54	$\frac{54}{144}$

	50	5	$2 \times 55 = 110$
			+ 100
2	100	10	$\frac{10}{110}$

	50	2	$8 \times 52 = 416$
			+ 400
8	400	16	$\frac{16}{416}$

	10	5	$7 \times 15 = 105$
			+ 70
7	70	35	$\frac{35}{105}$

	90	4	$5 \times 94 = 470$
			+ 450
5	450	20	$\frac{20}{470}$

	50	1	$3 \times 51 = 153$
			+ 150
3	150	3	$\frac{3}{153}$

	60	1	$6 \times 61 = 366$
			+ 360
6	360	6	$\frac{6}{366}$

	70	6	$4 \times 76 = 304$
			+ 280
4	280	24	$\frac{24}{304}$
